

A COMPUTER DISPLAY SYSTEM FOR DYNAMICALLY MODIFYING
STACKED AREA LINE GRAPHS TO CHANGE THE ORDER OR PRESENCE
OF A SET OF STACKED AREAS IN THE GRAPH RESPECTIVELY
REPRESENTATIVE OF THE PROPORTIONS CONTRIBUTED TO A TOTAL
5 BY EACH OF A SET OF TIME DEPENDENT VARIABLES

Abstract

Graphically displaying the proportion of a total
value of a time dependent variable contributed by each of
a set of elements. Applicable in a graph environment
10 comprising the steps of displaying the proportion
contributed by each element as an area within an ordered
set of areas under a line representative of the total
value of said time dependent variable. The user is
enabled to interactively select one area in the set of
15 areas and perform one of the following operations:
hiding the selected area, displaying the selected area or
reordering the position of the selected area within said
ordered set responsive to said user selection. This
implementation is effective in the manipulation of
20 stacked area line graphs by visualizing how the various
areas representative of the contributions of the
individual elements to the whole time dependent variable
affect and coact with the other variables in the set.
